Summary

Backend engineer with over 9 years of enterprise and freelance experience building resilient financial infrastructure. Strong technical expertise in the Java/Spring Boot ecosystem, core banking architecture, and high-throughput systems, while also contributing to front-end delivery and end-to-end product execution when the team needs full-stack support. Skilled at integrating new projects into legacy environments, optimizing system performance, and meeting strict SLAs.

Experience

Bank Zero

Back End Developer

Hybrid, Bryanston

July 2025 – Present

- Re-engineered mission-critical batch processing jobs, reducing runtime from multiple hours to approximately 20–30 minutes.
- Collaborated with stakeholders to design and integrate new modules into the core banking framework, focusing on scalable and resilient data flows.
- Managed high-throughput EFT ingestion and processing systems, ensuring idempotency and parallel execution for reliability.
- Standardized Java/Spring patterns through documentation and design best practices to improve consistency across the engineering team.
- Implemented financial posting logic for sponsored banking products in a regulated core banking environment.

nter

Full Stack Developer

Remote

October 2022 – July 2025

- Implemented backend systems using Spring Framework, Hibernate, and Azure services including Key Vault and Azure SQL.
- Supported responsive UI development using Angular and Material while contributing to a migration toward Tailwind.
- Designed and developed an integration with Unlayer Editor to support dynamic email template customization.
- Collaborated on database modeling and software architecture design for scalable web applications.

Investec

Software Developer

Sandton

February 2019 – October 2022

- Developed APIs for records management solutions, integrating Documentum with SQL-based databases.
- Contributed to a complex database migration from SQL to Documentum, creating custom tools and preserving data integrity.
- Modernized legacy communication systems for Email, SMS, and Fax by updating XSLT transformations and improving compatibility.

Skills

Domain Knowledge: Core Banking, Financial Systems, Payment Processing, EFT, Batch Processing
Frameworks and Tools: Java, Spring Eco-system, Python, SQL, REST APIs
Data Engineering: ETL, Docker, Kubernetes, PostgreSQL
Infrastructure: Git, Jira, Jenkins, Github Actions, Linux, Azure (Cloud, Keyvault, SQL)
Soft Skills: Cross-functional collaboration, mentoring, technical communication

Education

BSc Computer Science	2015–2017
University of Pretoria	Pretoria, South Africa
2nd Year	
Software Development	2018–2019
WeThinkCode__	Johannesburg, South Africa
Student	
National Senior Certificate	2010–2019
Pretoria Boys High School	Pretoria, South Africa
