Experience

Bank Zero

Back End Developer

Hybrid, Bryanston

July 2025 – Present

- **Performance Engineering:** Re-engineered mission-critical batch processing jobs, achieving a 95% reduction in latency. Refactored long-running 7-hour jobs to complete in 20–30 minutes.
- **Frontend Modernization:** Developed responsive solutions using Angular and Material, implementing a migration to Tailwind to improve development efficiency.
- **Architecture Design:** Collaborate with stakeholders to design and integrate new modules into the core banking framework, focusing on scalable and resilient data flows.
- **EFT Processing:** Manage high-throughput EFT data ingestion and processing systems, ensuring idempotency and parallel execution for maximum reliability.
- **Governance:** Drive technical excellence by standardizing the Java/Spring ecosystem through documentation and design best practices.
- **Financial Systems:** Work on implementing financial posting logic for sponsored banking products.

nter

Full Stack Developer

Remote

October 2022 – July 2025

- **System Development:** Implemented robust backend systems using Spring Framework, Hibernate, and Azure services including Key Vault and Azure SQL.
- **Frontend Modernization:** Developed responsive solutions using Angular and Material, implementing a migration to Tailwind to improve development efficiency.
- **Custom Features:** Designed and developed an integration with Unlayer Editor for dynamic email template customization.
- **Architecture:** Collaborated on comprehensive database modeling and software architecture design for scalable web applications.

Investec

Software Developer

Sandton

February 2019 – October 2022

- **API Development:** Developed APIs for records management solutions, successfully integrating with Documentum and SQL-based databases.
- **Data Migration:** Led a complex database migration from SQL to Documentum, designing custom tools and ensuring high data integrity.
- **Legacy Modernization:** Modernized legacy communication systems (Email, SMS, Fax), updating XSLT transformations to improve compatibility and client impact.

Skills

Programming: Java, Spring Boot, Python, SQL, REST APIs

Data

Engineering: ETL, Docker, Kubernetes, PostgreSQL

Tools: Git, Jira, Jenkins, Github Actions, Linux

Soft Skills: Cross-functional collaboration, mentoring, technical communication
